 **Manual or Auto Eject**

 **Labor Savings**

 **UL Approved**

 **Built-in Tire Counter**

 **One Year Warranty on All Parts**

Custom Tire Painter II™

The Custom Tire Painter II™ is the most advanced and reliable method on the market today for applying Dripless Tire Paint. It offers labor savings, quality control, and convenience combined with state-of-the-art components for trouble-free performance.

An upgraded programmable controller offers total tire painting automation. Once the operator sets the switch for large or small tires, the controller automatically adjusts the cycle time for smaller and larger tire diameters.

The Custom Tire Painter II™ applies an even coating of tire paint to the sidewall, including fluted areas and other hard-to-paint surfaces—without painting the tread. It provides excellent cost control by applying the exact amount of material required, without the mess and waste normally associated with manually painting tires.

The Custom Tire Painter II™ with ongoing upgrades has been in the marketplace for more than twenty years. There are many machines over ten years old in operation today, with several machines over fifteen years old with more than one million tires processed.
