

TIRE SEALANT BAGS

PSF Plus® stops leaks and keeps your equipment running.

If a puncture occurs, thousands of PSF Plus® fibers clot in and around the puncture to prevent any loss of air.

WHAT IS PSF PLUS®?

PSF Plus® is a lab-tested and field-proven liquid tire sealant that protects your tires from punctures up to 1/2" in diameter. The proprietary blend of corrosion inhibitors, polymers, and fibers helps maintain tire air pressure while it protects tire rims from rust. PSF Plus® is non-flammable up to 300°F, non-hazardous, and non-toxic. PSF Plus® cleans up easily with soap and water.

PSF PLUS® BAG SIZE:

48 ounce bags, with 12 bags per case

DIRECTIONS FOR USE:

Drop bag(s) into tire. Use our recommended quantity chart available on fullerbrothers.com.

For slow moving machines, please cut bag prior to placing inside of tire.

REDUCE COST

PSF Plus® seals most tire punctures up to 1/2" in diameter, including thinly constructed light-ply rated tires designed for low air pressure applications

PROVEN STRENGTH

PSF Plus® uses a variety of synthetic fibers and fillers that branch together to create an airtight plug. These fibers are so strong, they are also used as concrete reinforcement.

DURABLE REPAIRS

The more the tire is used, the better PSF Plus® works. As the tire moves and flexes, the fibers and fillers are compressed more tightly into the puncture, forming a long lasting repair. Effectively and immediately fixes bead leaks, valve leaks, slow leaks, leaks due to porosity, and keeps your equipment running.

BONUS PROTECTION

Included in the PSF Plus® formula is the finest corrosion and rust inhibitor: Tire Life®. Does not damage the tire or tire liner and does not react with or damage tire casing.

WORRY FREE

Our sealant suspension system is designed to hold together in extreme hot and cold temperatures with no product separation.
